- Responsible for the development process as a Web Content Administrator
- Responsible for creating the process of writing the Content Model on new, more complex pages

Projects

Jun 2023
- present

Frontend Architect

Procter & Gamble

In this project, I improve my leadership and organizational skills. I try to work with my Project Manager in the scrum methodology. I also do my coding part (70% of my time is dedicated to coding). I am responsible for the team. I also help them when they ask for it. The next thing I do is create a structure in Contentful.

- playing guitar and drums

Mar 2021
- Jun 2023

Front-end Developer

Procter & Gamble

Create new websites. In this case React.js/Next.js technologies with CMS Contentful. I'm responsible for creating an optimized, logical and not complicated Content Model.

I improve code writing on this project. More readable, reusable components. I was constantly trying to improve the writing of the Content Model for new websites and I also tried to pass this knowledge on to my colleagues on the project.

During this time, I became an accessibility "expert". I also put a lot of emphasis on achieving the best possible performance and SEO results

Feb 2022
- Jun 2022

Front-end Developer

Petstar

Migration all content from Wordpress to new Jamstack technologies. We used to Next.js (ISR) and Strapi CMS.

For me, it was a project that challenged me because I had a lot of responsibilities - for a Junior Developer, but thanks to it I also learned a lot. New CMS - Strapi. New team. I had a lot of meetings with clients, which taught me humility and an approach to the client.

My responsibility was to integrate the CMS with the code. Which was not an easy task because the way the CMS worked, created the data structure, and integrated with the code was completely different than with Contentful.

It was my first time with GraphQL and Apollo technologies.

Aug 2020
- Mar 2021

Head of Web Content Administrator Team

Procter & Gamble

Supplementing content on pages, creating a content model on CMS platforms. Introducing new people to the project. Creation of a new Content Model on new environments

My first job in the IT world. The first person to hold this position in the company. Even though the main responsibility was to add content to the websites via Contentful, also I had an adventure with Sitecore Platform - a very clumsy CMS. I also had the opportunity to write code in React
